PROJECT REPORT

DIGITAL LITERACY

NAME: SOURISH SHAW

REG NO: 25BOE10083

BRANCH: BIOENGINEERING

YEAR: 1ST YEAR

COURSE CODE: CSE0001

COURSE TITLE: DIGITAL LITERACY

DATE: 28.03.2026

Introduction

This project focuses on developing essential digital literacy skills required in today's technology-driven world. As a Student Digital Ambassador, the objective of this project is to understand and demonstrate the importance of using digital tools effectively, maintaining a professional online presence, and practicing safe and responsible online behavior. The project consists of five tasks, each covering different aspects of digital literacy, including infographic creation, digital portfolio building, platform exploration, professional communication, and cybercrime awareness. Through this project, I gained hands-on experience with various tools and platforms that are widely used in academic and professional environments. It also helped me understand how to present information clearly, communicate professionally, and stay safe in the digital world.

Task 1 Write-up

For creating my digital literacy infographic, I used Canva because it provides a wide range of templates, icons, and user-friendly design features. My infographic is a one-page visual representation that explains the concept of digital literacy in a simple and engaging way. It includes key topics such as the definition of digital literacy, useful digital tools for students, safe internet practices, professional online presence, and email etiquette. Each section is presented with minimal text and relevant icons to enhance visual appeal and understanding.

While working on this task, I found it interesting to explore different layouts and design elements that improve clarity. However, one challenge I faced was balancing the amount of text and visuals. It was difficult to keep the content concise while still covering all important points. Overall, this task helped me learn how to present information effectively using digital tools.

Task 2 Write-up

For my digital portfolio, I chose LinkedIn, GitHub, and Kaggle. LinkedIn is used for building a professional network, showcasing achievements, and connecting with industry professionals. GitHub is a platform for hosting and managing code repositories, allowing me to document and share my projects. Kaggle is used for learning and practicing data science and machine learning through real-world datasets and competitions.

Over the next four years, I plan to actively develop my presence on these platforms. On LinkedIn, I will regularly update my profile with my achievements, certifications, and internship experiences. On GitHub, I will upload my academic and personal projects to build a strong portfolio. On Kaggle, I aim to improve my skills by participating in competitions and working on datasets. These platforms will help me grow both technically and professionally.

Task 3 Write-up

For this task, I explored coding and collaboration platforms. I created an account on HackerRank and completed a beginner-level problem to understand basic coding challenges. This helped me improve my problem-solving skills and gain confidence in programming. Additionally, I used Google Forms to create a Digital Literacy Awareness Quiz consisting of five questions. The form included both multiple-choice and short-answer questions, and responses were automatically recorded in a linked spreadsheet.

This task was very useful as it introduced me to platforms that are important for academic growth and collaboration. Practicing coding on HackerRank will help me strengthen my programming skills over time. Creating a Google Form showed me how easy it is to collect and analyze data. Overall, these tools will support my learning and help me collaborate effectively with others.

Task 4 Write-up (100–150 words)

Effective digital communication is essential in academic and professional environments. One situation where poor digital communication can cause problems is when a student sends an informal or unclear email to a professor. This can lead to misunderstandings or a negative impression. Such situations can be avoided by following proper email etiquette, including using a clear subject line, maintaining a respectful tone, and structuring the message properly.

Through this task, I learned the importance of communicating clearly and professionally in digital platforms. Using proper etiquette not only ensures that the message is understood correctly but also reflects a positive and responsible attitude.

Task 5 Write-up

While researching cybercrime, I was surprised by how advanced and convincing phishing attacks have become. Many fake messages and websites look almost identical to real ones, making it difficult to identify them. I realized that even a small mistake, such as clicking on an unknown link, can lead to serious consequences like financial loss or data theft.

One habit I plan to change is being more cautious before clicking on links or sharing personal information online. I will make it a practice to verify the authenticity of messages and websites before taking any action. This task has made me more aware of online threats and the importance of following safe digital practices.

Conclusion

This project helped me understand the importance of digital literacy in today's world. I learned how to use digital tools effectively, maintain a professional online presence, and communicate responsibly. The tasks also increased my awareness of online safety and cyber threats. Overall, this project has improved my technical and communication skills and prepared me to use digital technologies more confidently in my academic and professional journey.
